Task 1: Data Cleaning

Data Cleaning Performed

1. Loaded five datasets:
 - Orders Dataset
 - Order Items Dataset
 - Products Dataset
 - Reviews Dataset
 - Customers Dataset
2. Checked for missing values in all datasets.
3. Verified data types for dates, prices, review scores, and IDs.
4. Checked for duplicate records and removed duplicates if found.
5. Merged datasets using:
 - customer_id
 - order_id
 - product_id
6. Retained only relevant columns required for sales and customer analysis.
7. Converted date columns into proper date/time format for monthly trend analysis.

1. Create the 6 Charts

You should have:

- ☒ Revenue by Product Category
- ☒ Monthly Sales Trend
- ☒ Revenue by State/Region
- ☒ Average Order Value Trend

- ✓ Review Score Distribution
- ✓ Top 10 Categories by Revenue (or Top States by Revenue)

2. Create Dashboard Sheet

Create a new sheet named:

Dashboard

At the top create KPI cards:

KPI	Value
-----	-------

Total Revenue	13,591,643.7
---------------	--------------

Total Orders	113,425
--------------	---------

Top Category	bed_bath_table
--------------	----------------

Best Month	May
------------	-----

Below that paste:

- Revenue by Category Chart
- Monthly Trend Chart
- Revenue by State Chart
- Review Score Pie Chart

Arrange neatly.

3. Business Insights Report

Insight 1

The bed_bath_table category generated the highest revenue among all product categories. The company should prioritize inventory and marketing investments in this category.

Insight 2

Sales peaked during May, indicating strong seasonal demand. Promotional campaigns should be increased before this period to maximize revenue.

Insight 3

The state of São Paulo (SP) contributed the highest sales revenue. Expanding customer acquisition efforts in nearby regions may increase market share.

Insight 4

Average order values remained relatively stable throughout the year, with a slight increase during September and October. Premium product bundles can be introduced during these months.

Insight 5

Most customers provided 5-star reviews, showing high customer satisfaction. The company should continue maintaining service quality while addressing lower-rated feedback.

4. Surprising Finding

The most surprising finding was the significant dominance of São Paulo in overall sales performance. A large portion of total revenue originates from a single state, highlighting strong regional concentration. This suggests that expanding successful strategies to other regions could create substantial growth opportunities.

5. GitHub README

Title:

E-Commerce Sales Analysis

Project Objective

Analyze e-commerce sales data to identify revenue trends, top-performing product categories, regional performance, customer review patterns, and business opportunities.

Tools Used

- Microsoft Excel

- Pivot Tables
- Pivot Charts
- Power Query

Key Findings

- Highest Revenue Category: bed_bath_table
- Peak Sales Month: May
- Best Performing State: SP
- High Customer Satisfaction through 5-star reviews

Dashboard

The dashboard was created in Microsoft Excel using Pivot Tables, Pivot Charts, and Power Query. It provides a one-page summary of key business metrics including total revenue, total orders, top-performing category, best sales month, regional performance, monthly sales trends, and customer review distribution.

Revenue by Category Chart:

Monthly Trend Chart

Revenue by State Chart

Review Score Pie Chart

Conclusion

The analysis identified the top-performing product category, peak sales periods, and the strongest revenue-generating regions. Customer reviews indicate high satisfaction levels, while seasonal trends reveal opportunities for targeted marketing campaigns. The dashboard provides management with a clear overview of business performance and supports data-driven decision-making.
